                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided they CC are not identical to Genbank sequences A1761441.1, A1594390, NM 004338 CC and A0177461. Also included are expression vectors, host cells, the MIVR-CC in polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting CC a molecule having cardiac cell anti-apoptotic activity with a candidate CC eigent, where the molecule is a nucleic acid molecule comprising MIVR-1, CC IEX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining CC if the anti-apoptotic activity is modulated and thereby identifying a CC of the invention are useful for treating, diagnosing and monitoring CC progression of such diseases and disorders as characterised by increased CC apoptotic cell-death of vascular endothelial cells e.g. cardiac CC hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart CC failure. The present sequence encodes human MIVR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

At least one or two of the gene expression products forming a pattern used to determine the microsatellite status or the hereditary or sporadic nature of the cancer are selected individually from any of the 134 genes comprising 367-7850 bp (AEB22706 to AEB22839), given in the specification. Also included are a method for treating an individual; a method for reducing malignancy of a cell; a method for producing antibodies against an expression product of a cell from a biological tissue; pharmaceutical composition, for treating a classified cancer, comprising at least one antibody, at least one polypeptide, or at least one nucleic acid and/or probe; and an assay, for classification of cancer in an individual having contracted cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising at least one marker capable of determining the microsatellite status in a sample and at least one marker in a sample determining the prognostic marker, where the microsatellite status and the prognostic marker is determined simultaneously or sequentially. The method above is useful for producing an assay for classifying cancer in animal tissue. The peptide, gene, or probe is useful for preparing a pharmaceutical composition for the treatment of a cancer in animal tissue. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 4930 BP; 1133 A; 1331 C; 1324 G; 1142 T; 0 U; 0 Other

mammals. The invention also relates to nucleic acid and polypeptide CC sequences at least 80% identical to the TAT nucleic acids and comparising a TAT nucleic cody, an antibody specific for a TAT polypeptide; a peptide or organic complecule which binds to a TAT polypeptide; fusion proteins comprising a TAT nucleic cody, an antibody specific for a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or cody, and the cancer in mammals. TAT polypeptides, nucleic acids, concert in mammals. TAT polypeptides, nucleic acids, concert in mammals. TAT polypeptides nucleic acids, concert, antagonists, binding molecules and compositions are useful concerts. The concerts are concerts of the cancer, colorectal cancer, lung cancer, ovarian cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central cancer, pancreatic cancer, cervical cancer, cancers of the central cancers as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence corporesents a TAT nucleic acid of the invention
                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rumour-associated antigenic target; TAT; human; overexpression; c tumour; diagnosis; cell proliferative disorder; breast cancer; colorectal cancer; lung cancer; ovarian cancer; liver cancer; central nervous system cancer; bladder cancer; pancreatic cancer; cervical cancer; melanoma; leukaemia; hybridisation probe; chromosome identification; chromosome mapping; gene mapping; gene therapy; cytostatic; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ξ
                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prostate cancer or tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (GETH )

Williams
                                                                                                                                                                                                                              ACC49493 to ACC49552 encode the human tumour-associated antigenic target (TAT) proteins given in ABP97175 to ABP97234. The present invention describes an isolated antibody that binds to a polypeptide having at least 80 % sequence identity to any of the 60 150-800 residue amino acid sequences (S1), given in ABP97175 to ABP97234, comprising (S1), lacking its associated signal peptide, encoded by any of the 60 2000-3000 base pair sequences (S2), given in ACC49493 to ACC49552. TAT proteins have cytostatic activity. The antibody can be used for treating or diagnosing tumours or cancers in mammals, e.g. prostate cancer, lung cancer, breast cancer, colon cancer, ovarian cancer, prostate adenocarcinomas, renal cell carcinomas, or thyroid cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                27-MAR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO2003024392-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; tumour-associated antigenic target; TAT;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                     autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA chairment that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene expression of at least 60% of the genes correlates with that of the gene expression of a the least 60% of the genes for targeting in the treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis; in a mammal other than a mouse; diagnosis of rheumatoid arthritis; diagnosis or cher than a mouse; diagnosis of rheumatoid arthritis; diagnosis or array or gene chip, specific for rheumatoid arthritis; diagnosis or carray or gene chip, specific for rheumatoid arthritis; diagnosis or carray or gene chip, specific for rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collagentinduced arthritis; and reducing the symptoms associated with collagentinduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antiput, and compositions of the present invention are useful for the analysis of the present invention are useful for the analysis and treating autoimmune disease or arthritides, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   autoimmune disease; arthritide; gene expression analysis; rheumatoid arthritis; collagen-induced; immunosuppressive; antirheumatic; antiarthritic; osteopathic; antigout; antiinflammatory; dermatological; immunomodulatory; lupus; ankylosing spondylitis; Fibrositis; fibromyalgia; osteopathritis; gout; juvenile rheumatoid arthritis;
                              rheumatoid arthritis, lupus, ankylosing spondylltis, fibrositis, ifibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an immune disease caused by an infectious agent. This polynucleotide represents a DNA sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and the state of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis; diagnosis or array or gene chip, specific for rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; screening the

induced arthritis. The compositions of the invention have the following
activities: immunosuppressive, antirheumatic, antiarthritic, osteopathi
antigout, antiinflammatory, dermatological, and immunomodulatory. The
methods and compositions of the present invention are useful for
diagnosing and treating autoimmune disease or arthritides, such as
rheumatorid arthritis, lpus, ankylosing spondylltis, fibrositis,
fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and
immune disease caused by an infectious agent. This polynucleotide
represents a DNA sequence relating to the genes used in the analysis an
treatment of autoimmune diseases or arthritides. Note: This sequence is
not shown in the specification. It has been supplied in an electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC over-expressed in adipose tissue and as such it provides targets for anti CC obesity pharmaceutical compositions. Specifically, it refers to a high CC mobility group I-C protein (HMGI-C) that is associated with obesity and CC is epistatic to leptin, furthermore, it refers to the obgene where an CC autosomal recessive trait is linked to obesity and diabetes. The present CC invention describes performing differential gene expression analysis CC between the white adipose tissue (WAT) or stromal vascular tissue (SVT) CC of any two different mice selected from a group consisting of wild-type, CC HMGI-C-/-, ob/ob, or HMGI-C-/- ob/ob genotype mice. Accordingly, using CC this method novel nucleotides and the encoded proteins thereof were CC identified that are adipocyte specific, and as such can be used for CC preventing adipogenesis, diagnosing and treating diabetes, obesity, These compositions exhibit anorectic, antidiabetic and compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and compounds that or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and compounds that or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and compositions are prevented to the invention.

useful for diagnosis, treatment and ä screening for specific binding

German

This invention describes novel cytostatic polynucleotide and polypeptide cor the risk of developing prostatic cancer. Diagnosis is based on the risk of developing prostatic cancer. Diagnosis is based on compositatic cancer cancer. Diagnosis is based on the risk of developing prostatic cancer. Diagnosis is based on compositatic cancer. Diagnosis is based on the prostatic cancer can be called the cancer of the sequences in prostatic cancer involves a binding assay, any compounds that bind are composited the cancer of the sequences or detection of a publicated minimum level of the reporter indicates the presence of the unour cells. Inhibitors can be chosen from antisense oligonucleotides, compounds that bind are composited the presence of the prostatic profession of a predetermined minimum level of the reporter indicates the presence of the unour cells. Inhibitors can be chosen from antisense oligonucleotides, and the composite the polypeptide, preferably 300, that binds to the polypeptide; an the polypeptide profession and the polypeptide, and the polypeptide, and or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that the prostatic cancer patients, or subjects at risk, were incubated from prostatic cancer patients, or subjects at risk, were incubated from prostatic cancer patients. The monoclonal antibodies; and then diaminobenzidine as colour former (brown). The graphes were counterstained with hemalum (blue). Malignant cells stained cancer samples of cancercinoma, membrane and cytoplasmic staining was very strong, and colour invention.

This invention describes novel cytostatic polynucleotide and polypeptide cor the risk of developing prostatic cancer. Diagnosing prostatic cancer determining over transcription or over expression of the sequences in corpostatic tissue. Screening for inhibitors of the sequences in corpostatic tissue. Screening for inhibitors of the sequences or detection corpostatic cancer corpostatic tissue. Screening for inhibitors of the sequences or detection corpostatic tissue. Screening for inhibitors of the sequences or detection corpostatic potionally after deconvolution of mixtures. Detection of a corpostatic potionally after deconvolution of mixtures. Detection of a corpostatic cancer inhibitors can be chosen from antisense oligonucleotides, corpostatic potions and the polypeptide; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an corpostatic polypeptide, preferably humanised or human; an anti-idiotype, non-human corpostatic preferably humanised or human; an anti-idiotype, non-human corpostatic properties, and the polypeptide; and the polypeptide, and the polypeptide; and the polypeptide, preferably humanised or human; the polypeptide; and corpostatic cancer by differential expression analysis, using DNA microarrays, corpostatic cancer by differential expression analysis, using DNA microarrays, corpostatic cancer patients, or subjects at risk, were incubated that the polypeptide properties and then diaminobenzidine as colour former (brown). The sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained conjugated horseradish the polypeptide sequences used in the method of the conjugation.

                                                                                                                                    Ś
                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                        This invention relates to a novel isolated nucleic acid associated with CC bronchial cancer comprising 489 defined sequences given in the CC specification. The invention may be useful for the production of CC compounds with a cycostatic activity through the inhibition of expression CC compounds with a cycostatic activity through the inhibition of expression CC concern for tumour-associated proteins. The novel DNA sequences and CC cancer or determining the risk of developing it and to screen for CC specific binding partners of the DNA or protein sequences, where the binding partners are potentially useful as agents for treating or CC diagnosing bronchial cancer. The DNA or protein sequences can also be used for prognosis, detection of metastases and for secondary treatment CC (of tumours that have been stabilised or are no longer detectable). CC Detecting abnormal expression of the DNA sequences provides early CC diagnosis of bronchial cancers. The present sequence is that of a novel bronchial cancer-associated human gene sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       X R X R

The nucleic acid sequences the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid sequence that is expressed by cancer cells, useful as target for treating, preventing cancers, particularly prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel proteins and their coding sequences (ADC37168-ADC37455), which activate nuclear factor kappa B (NF-kappaB). The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases, or ischaemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New purified protein that activates nuclear factor kappa B (NF. useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseaschemic disorders.

The invention relates to a novel human nucleic acid sequence of the comparises and its encoded protein. The invention further comprises: CC proteins and peptides, preferably isolated, that contain a sequence encoded by the novel nucleic acid; and methods for diagnosis and treatment of pancreatic cancer, using a substance that inhibits or binds content protein or its DNA, including: an antisense oligonucleotide, short interfering RNA or ribozyme directed against the pancreatic protein, an organic molecule, particularly having a molecular weight below 5000, and creatily 300, that binds to the pancreatic DNA, an aptamer or (monoclonal) antibody, preferably human or humanized, that binds to the pancreatic DNA, an aptamer or (monoclonal antibody, any of which may be derivatized with a reporter group, cytocoxic compound, immunostimulant and/or radioisotope. The novel human pancreatic proteins and their encoding DNA have cytostatic activity. The novel sequences are useful for inhibiting transcription and/or expression of genes and proteins associated with ancreatic cancer. This polymucleotide sequence represents the DNA encoding one of the novel shown in the specification, it has been electronically downloaded of office a DVD-rom provided with this specification by the Buropean Patent

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods a determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The conversion vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a conjugation of the invention; antibodies which specifically bind a conjugation of the invention; and antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and mucleic acids. The nucleic acids, polypeptides, concer and other conditions such as pooriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal convascularistation syndromes, scarring and uterine fibroids. They may sequence represents a nucleic acid sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-FEB-2002;

The present sequence encodes a human TANGO 261 polypeptide. The CC specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular CC proliferation, modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular differentiation, modulate cellular differentiation, modulate cellular cC adhesion, and cell traffishing and/or migration, modulate cellular cC adhesion, and cell traffishing and/or migration, modulate cellular cC cancer, modulate the proliferation, differentiation, and/or function of cC cancer, modulate the proliferation, and leukocytes, treat bone marrow, cC pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial casthma and bronchiectasis, intestinal disorders, spleen associated cC diseases, modulate renal disorders, treat cardiovascular disorders such cC as ischemic heart disease, modulate the proliferation, differentiation, cand/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, cerebral codema, hydrocephalus, cc disease, multiple sclerosis, brain cancers, hydrocephalus and cc encephalitis, and treat hepatic diseases, hydrocephalus and cencephalitis, and treat hepatic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-MAR-2000; 2000WO-US005226

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

1st strand cDNA was primed with a NotI-01igo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
